

# SRM Placements Portal

## Company Research & Placement Analytics

- Building an AI-powered placements intelligence portal
- Designed to enable targeted, outcome-driven campus preparation
- Focused on companies, skills, hiring patterns, and innovation readiness

# What Are We Building?

## **Comprehensive Company Research**

Deep insights across 163  
structured parameters

## **Top Hiring Skill Sets**

Top 12 skill sets expected  
during campus hiring

## **Hiring Process Intelligence**

Typical hiring rounds,  
evaluation focus, interview  
patterns

## **InnovX Accelerator Model**

Innovation-driven  
preparation mapped to  
company digital strategy

# InnovX Accelerator Model

## Company-Aligned Innovation Preparation

### Enables students to:

- Prepare specifically for target companies
- Build and showcase strategically relevant projects

### Projects aligned to:

- Company business challenges
- Digital transformation priorities
- Real-world industry problem statements

### Bridges the gap between:

- Academic learning
- Industry expectations

# How This Helps Students (Functional Value)

## Placement-Centric Advantages

### Early Career Planning

- Useful from 1st year onwards for IT career planning
- Provides visibility into:
- Marquee, Super Dream, Dream, and other companies

### Focused Preparation

- Enables:
- Focused preparation, not generic learning
- Better understanding of company context before interviews

### Interview Performance

Improves interview performance by:

- Knowing company challenges, customers, and strategy
- Answering questions with contextual clarity

# How This Helps Students (Technical Value)

## New-Age Engineering Exposure

Built using AI-Next Engineering principles

### Exposes students to:

- High-velocity engineering practices
- Modern software development approaches

### Develops critical skills:

- Handling large-scale data
- Structuring and organizing complex information
- Thinking in terms of system design and performance

### Provides an edge for:

- High-performance and niche engineering teams

# Architecture Learning Through This Project

## End-to-End System Thinking

Students will gain exposure to:

**Data Architecture**

**Application &  
Functional  
Architecture**

**UI / UX Architecture**

**Business Architecture**

**Component Architecture**

**Test & Deployment Architecture**

**Security Architecture**

Helps students understand how real-world enterprise systems are designed.

# Agentic AI at the Core

## Future-Ready Architecture

Entire application built on Agentic AI architecture

Students will learn:

- How AI agents collaborate within an application
- How automation and intelligence are embedded by design

Represents:

- The current trend
- The future of scalable software systems

# Phase 1

## Foundation & Data Ingestion

01

---

Perform large-scale data ingestion

02

---

Understand:

- Each portal component clearly
- Data structure and automation workflows

03

---

Establish:

- Strong foundational understanding before development

 TODAY'S SESSION

# Phase 2

## Team-Based Application Development

Students work as a collaborative team

Each member owns one major component of the portal

### Outcome:

- End-to-end working application
- Strong sense of ownership and collaboration

# Session Outcome

## What Students Will Take Away

Clear understanding of:

- Company-driven placement preparation
- Modern AI-powered application development

Hands-on experience in:

- Data, architecture, AI agents, and teamwork

A real sense of:

- Achievement
- Industry readiness
